REPLY TO: ESHD  
ATTN OF:

SUBJECT: Remedial Action Program on Lands Adjacent to the Rocky Flats Plant, FY 1985

TO: James R. Nicks, Area Manager, Rocky Flats Area Office

A remedial action program on properties immediately east and south of the Rocky Flats Plant is discussed in this Action Description Memorandum (ADM). The proposed action consists of plowing, disking and seeding of specified parcels of land that exceed the State of Colorado standard for plutonium in soil (two disintegrations per minute per gram).

The soil concentrations are lower than the EPA proposed guidelines for transuranics in soil, and represent no significant health hazard to the workers or to the public. In addition, the soil mixing and seeding will be performed only when the moisture content and wind conditions are such to prevent air dispersion. Following review of the subject ADM, it is concluded that this project is not a major Federal action which will significantly affect the quality of the human environment. No additional environmental documentation is required for this project.
